

Sr No.	Unit No.	Question
1	1	Explain User defined function and it's category with example.
2	1	Difference between Actual argument and Formal argument.
3	1	Difference between Call by value (Pass by value) and Call by reference (Pass by reference).
4	1	Explain Passing an arrays to function with example.
5	1	Explain Recursive function with example.
6	1	Write a program to add two numbers using function.
7	1	Write a program to find maximum and minimum between two numbers using function.
8	1	Write a program to find factorial of a number using function.
9	1	Write a program to find power of any number using recursion.
10	2	Explain Structure with example.
11	2	Explain Array of Structure with example.
12	2	Explain Arrays within Structure with example.
13	2	Explain nested structure with example.
14	2	Difference between structure and union.
15	2	Write a program to Create a structure book with book title, author, publication, and price. Read data of 3 books and display.
16	2	Write a program to create a structure book with book title, author, publication, and price. Read data of 3 books and display.
17	2	Write a program to create structure student with name, percentage and age. Read data of 5 students using array of structure.
18	2	Define a structure called Players which describe details like p_name, team, score, average. Write a program to read data for 3 players and print that data.
19	2	Create structure student with name, percentage and age. Read data of N students using array of structure. Print details of student with maximum percentage.
20	3	Explain Pointer Declaration and Initialization with example.
21	3	Explain Array of Pointers with example.
22	3	Explain Pointer to Structure with example.
23	3	Explain Dynamic Memory Allocation functions with example.
24	3	Write a program to calculate sum of two numbers using pointer.
25	3	Write a program to swap value of two numbers using pointer.
26	3	Write a program to store n elements in an array and print the elements using pointer.
27	3	Write a program to calculate the sum of n numbers entered by the user using malloc().
28	3	Write a program to calculate the sum of n numbers entered by the user using calloc().
29	4	Explain Pre-processor Directives in C.
30	4	Explain Macro Directives with example.
31	4	Explain File inclusion Directives with example.
32	4	Explain Compiler Control Directives with example.
33	4	Explain #undef Directive and #pragma Directive with example.
34	4	Write a program to calculate area of circle using #define pre-processor.
35	4	Write a program define a function like Macro that should use printf Define Macro PRINT to print given integer argument.
36	5	Difference between text files and binary files.

Subject 2304CS201 – CP-II

Faculty: A. G. Badresiya

37	5	Explain File pointer with example.
38	5	Explain all available file handling modes.
39	5	Explain fgetc() Function and fputc() Function with example.
40	5	Explain putw() Function and getw() Function with example.
41	5	Explain fprintf() Function and fscanf() Function with example.
42	5	Explain feof() Function and ferror() Function with example.
43	5	Explain Command Line Arguments with example.
44	5	Write a program to count chars, spaces, tabs and new lines in a file.
45	5	Write a program to print contents of file in reverse order.
46	5	Write a program to append one file at the end of other.
